Three Roll Mills

Three Roll Mills are mainly used to dispersing, mixing, refining and homogenizing viscous pastes of all kinds, i.e., paints and printing inks, chocolate, artist's colors, coloring crayons, eye makeup, lip stick and skin care products, fine soaps, pigmented coating compounds, plastic pastes, marzipan, shellac glazes, processed cheeses, etc. Grinding effect is achieved by three horizontal rollers squeezing each other with very high shear force. Our machines are designed in San Diego, California.

We also buy and trade used three roll mills.
